

Photoshop CS2: Web Design

Duration:

One day

Description:

This ILT Series course builds on the concepts and skills covered in Photoshop CS2: Basic and Advanced. Students will learn how to optimize images for use on the Web, and will study the advantages of using image slicing techniques. In addition, this course covers how to create links and rollover effects in Web images. Finally, students will learn how to automate various Web tasks, creating "droplets" and Web photo galleries, and how to create animations for the Web.
